TRIPLE! TRIPLE!

The right light

System 373 Trinocular Microscopes

Here's an eye-popping offer you won't want to miss. These microscopes feature 25% greater magnification and a 15% wider field of view than other models. And with nearly 8" of working distance when used with a 0.5X reducing lens, you can easily maneuver an object being inspected without damaging it.

Systems are mounted on a 10" x 10" die-cast base with a 19.5" vertical column and a 24" horizontal dual boom extension that uses ball-bearings for fluid movement. Stands can be adjusted to virtually any vertical or horizontal angle, and heads can be rotated 360° in their focus mounts. Some models include a USB 2.0 STD camera that lets you capture up to 29 color images with a 1024 x 768 pixel resolution in full frame mode and as many as 120 frames in partial scan mode. Lighting options vary by model, as listed below.

Specifications:

- Optical Magnification: 7X - 45X
- Video Magnification: 16.7X - 107.2X
- Optical Field of View: 32.8mm - 5.1mm
- Video Field of View: 22.9mm - 3.6mm
- Working Distance: 118mm
